Microsoft 365

A complete, intelligent, secure solution to empower employees

| Office 365 | Windows 10 | Enterprise Mobility + Security |

Technology Needs are Evolving in the Modern Workplace

Modern IT

| Single Device	⇄	Multiple Devices
Business Owned	⇄	User and Business Owned
Corporate Network & Legacy Apps	⇄	Cloud Managed & SaaS Apps
Manual	⇄	Automated
Reactive	⇄	Proactive
High-touch	⇄	Self-Service

Microsoft Endpoint Manager

A cloud-enabled transformative platform for unified and secure endpoint management

Cloud-driven Intelligence

Microsoft endpoint manager

Unified admin console			
Configuration Manager		**Microsoft Intune**	
Desktop Analytics	Autopilot	App Protection Policies	Endpoint Analytics
	Endpoint Security		
Other endpoint management capabilities in Microsoft 365			

1 Tenant attach

Configuration Manager console

2 Co-management workloads

M365 Device Management console

Configuration Manager

Microsoft Intune

3 Cloud-only management

Domain joined PCs

Windows 10 **CM + MDM**

Windows and Mobile devices

Windows Update for Business

enables IT administrators to keep the Windows 10 devices in their organization always up to date with the latest security defenses and Windows features by directly connecting these systems to Windows Update service. You can use Microsoft Intune to configure the Windows Update for Business settings that control how and when Windows 10 devices are updated.

Disk Encryption

Bitlocker is a device encryption feature of Windows. Encryption helps protect the data on your device so it can only be accessed by people who have authorization.

App Protecion Policies

are rules that ensure an organization's data remains safe or contained in a managed app. A policy can be a rule that is enforced when the user attempts to access or move "corporate" data, or a set of actions that are prohibited or monitored when the user is inside the app. A managed app is an app that has app protection policies applied to it, and can be managed by Intune.

OneDrive for Business

With Microsoft OneDrive, you can easily and securely store and access your files from all your devices. You can work with others regardless of whether they're inside or outside your organization and terminate that sharing whenever you want. OneDrive helps protect your work through advanced encryption while the data is in transit and at rest in data centers.
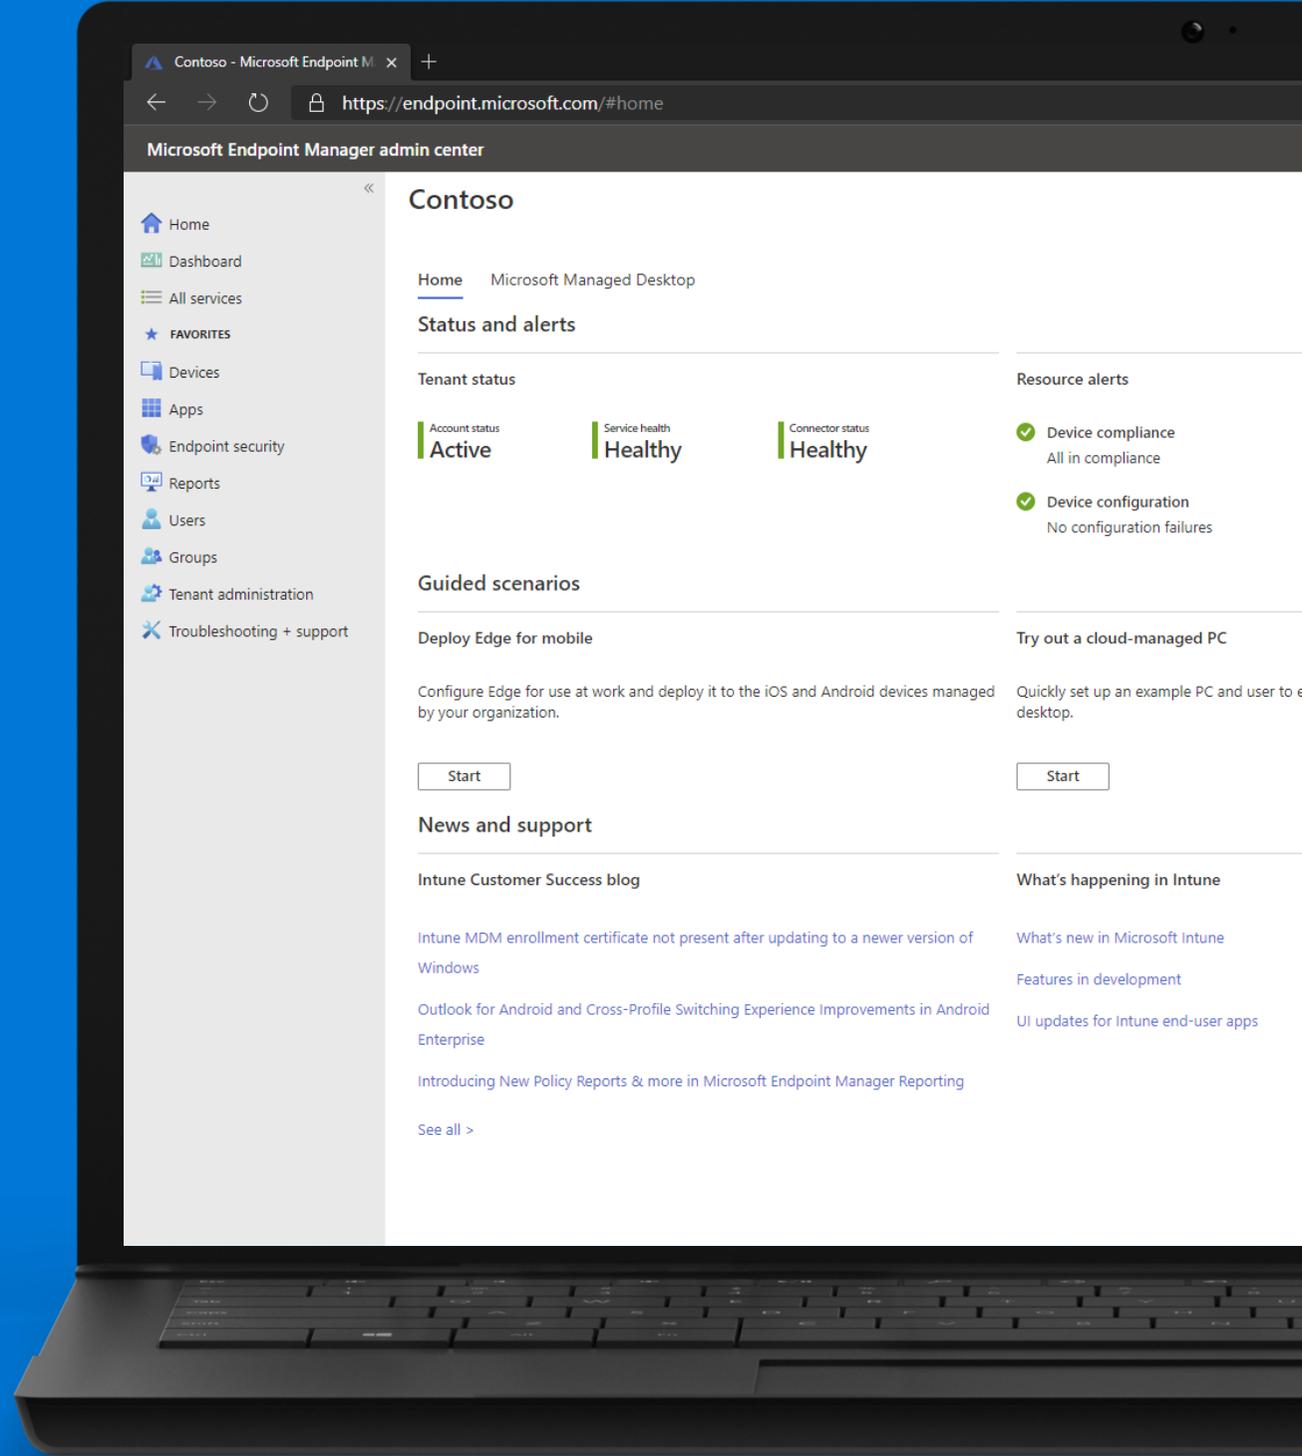

Windows Hello for Business

replaces passwords with strong multi-factor authentication on Windows 10 platforms, including PCs and mobile devices. This authentication consists of a new type of user credential that's linked to a device and uses a biometric or PIN.
