

#POWERCON2021

Publicare applicazioni aziendali utilizzando
Azure AD Application Proxy

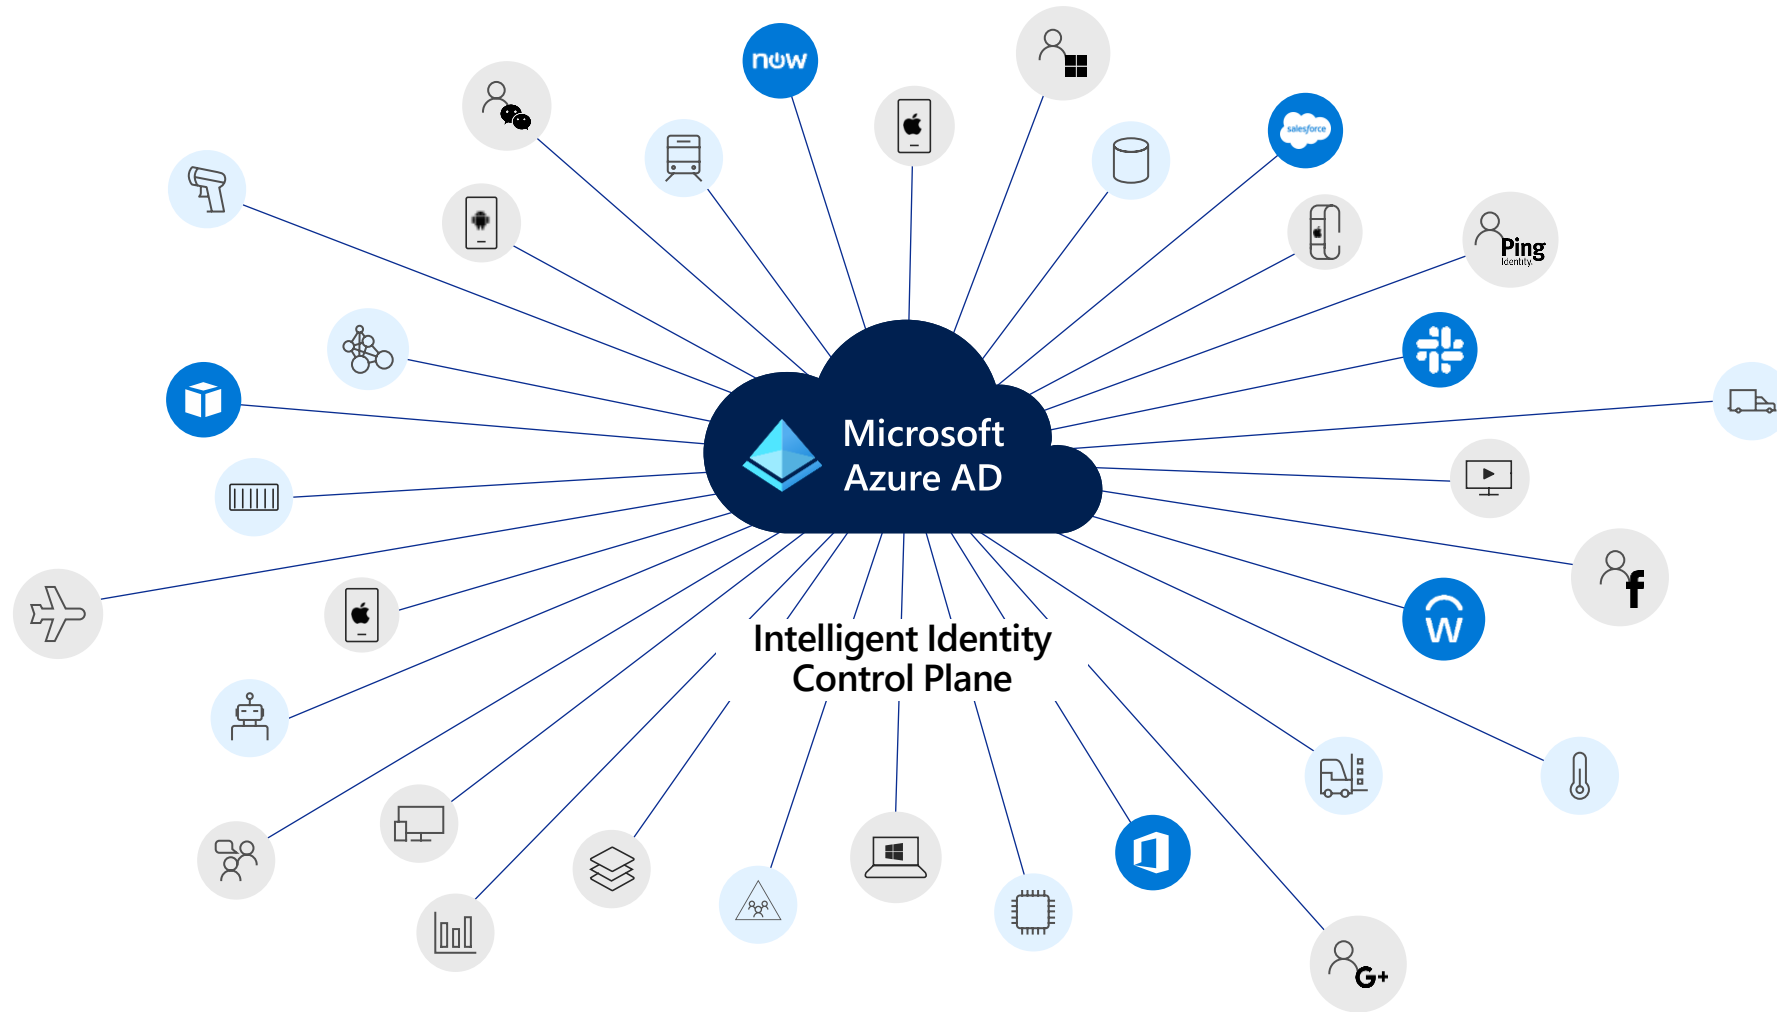

Roberto Tafuri
Senior Consultant

Nicola Ferrini
Microsoft MVP

Agenda

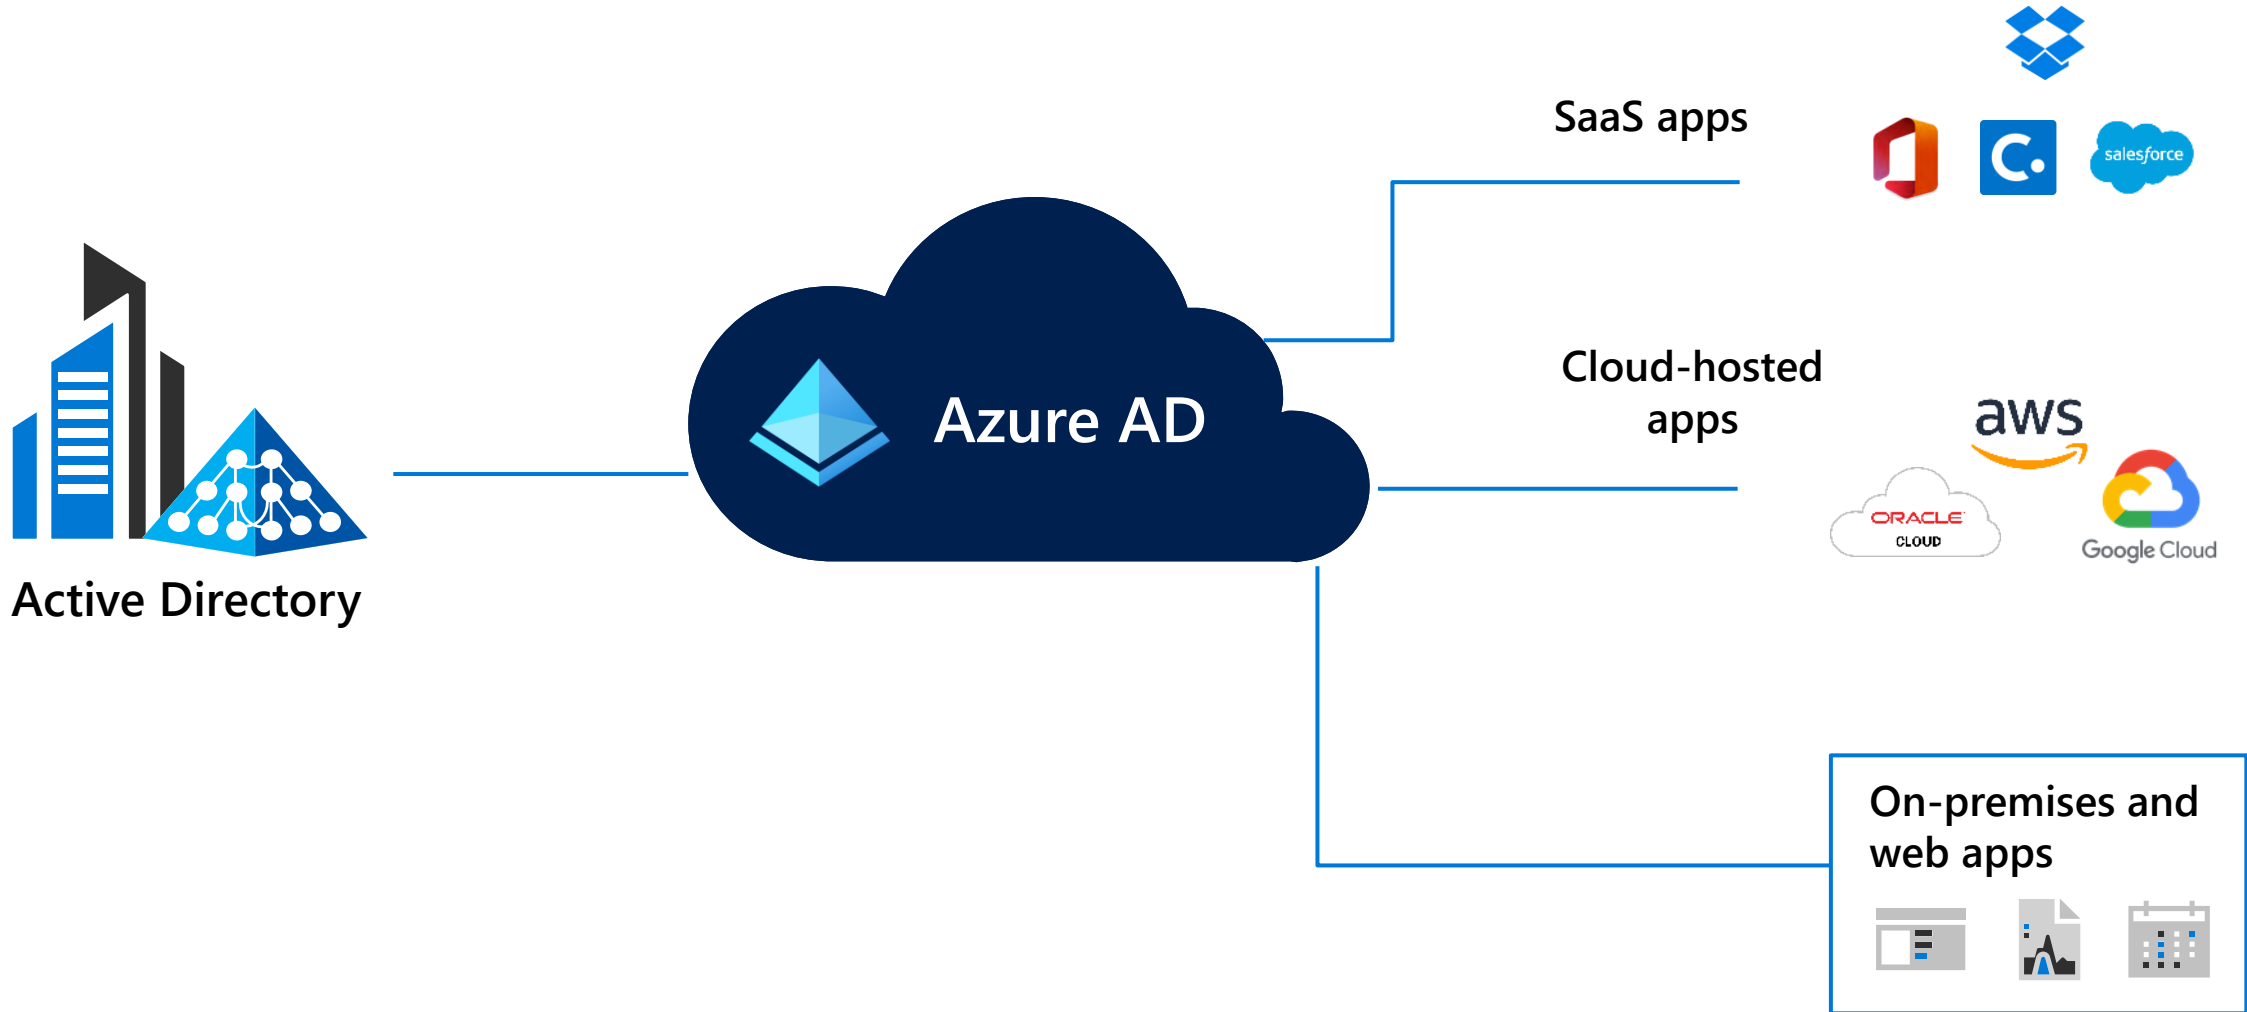

- Provides secure remote access to on-premises web applications.
- Using Azure AD Application Proxy to publish on-premises apps for remote users

Identity is the control plane for digital transformation

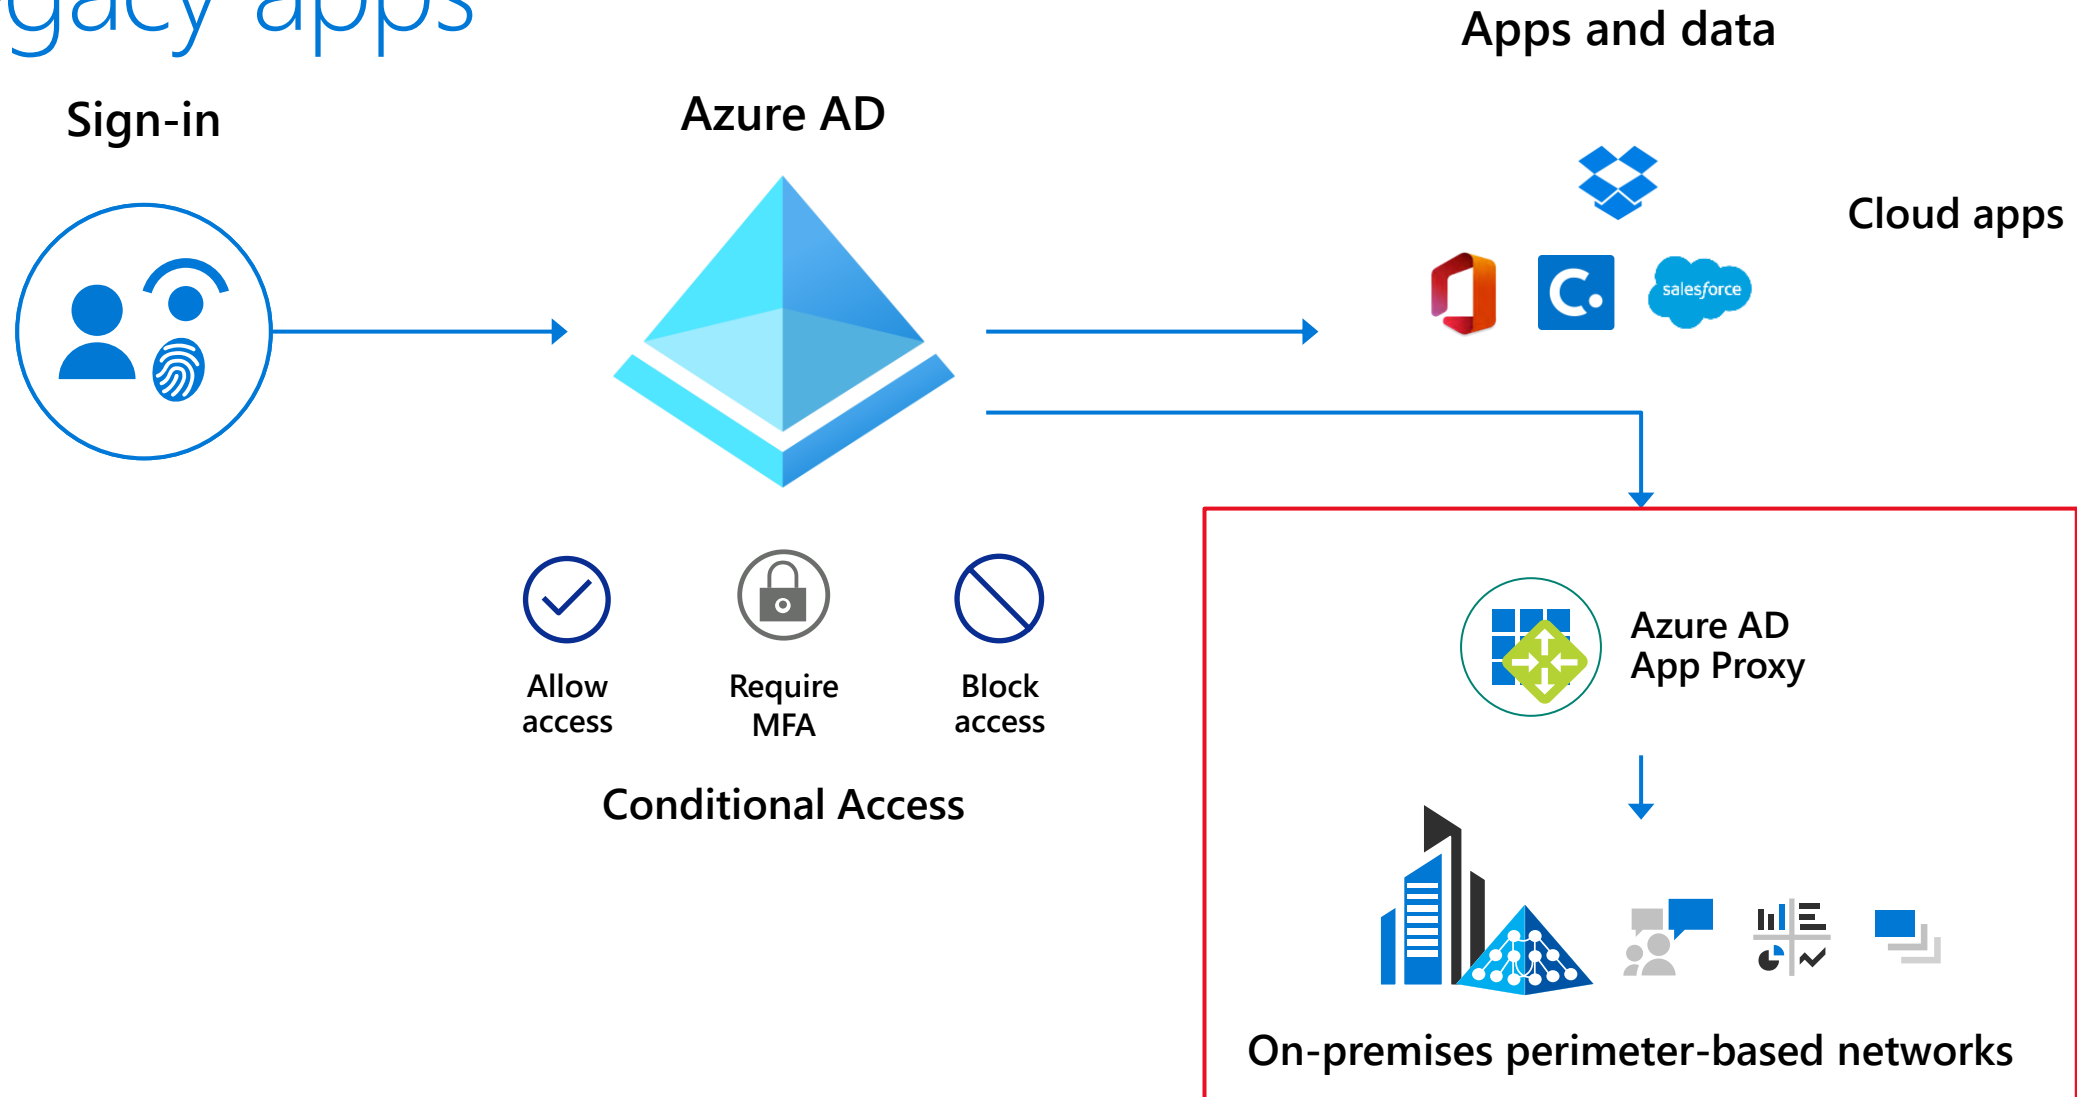

Manage all your apps from one central location

Gain a single consolidated view across all your applications

Deliver consistent single sign-on experiences to legacy apps

Pricing

Azure AD Premium P1 is available STANDALONE and is available also in the following plans:

Microsoft 365 Business Premium

Microsoft 365 Education E3 + E5

Microsoft 365 Enterprise E3 + E5

Enterprise Mobility + Security (EMS) E3 + E5

Azure AD

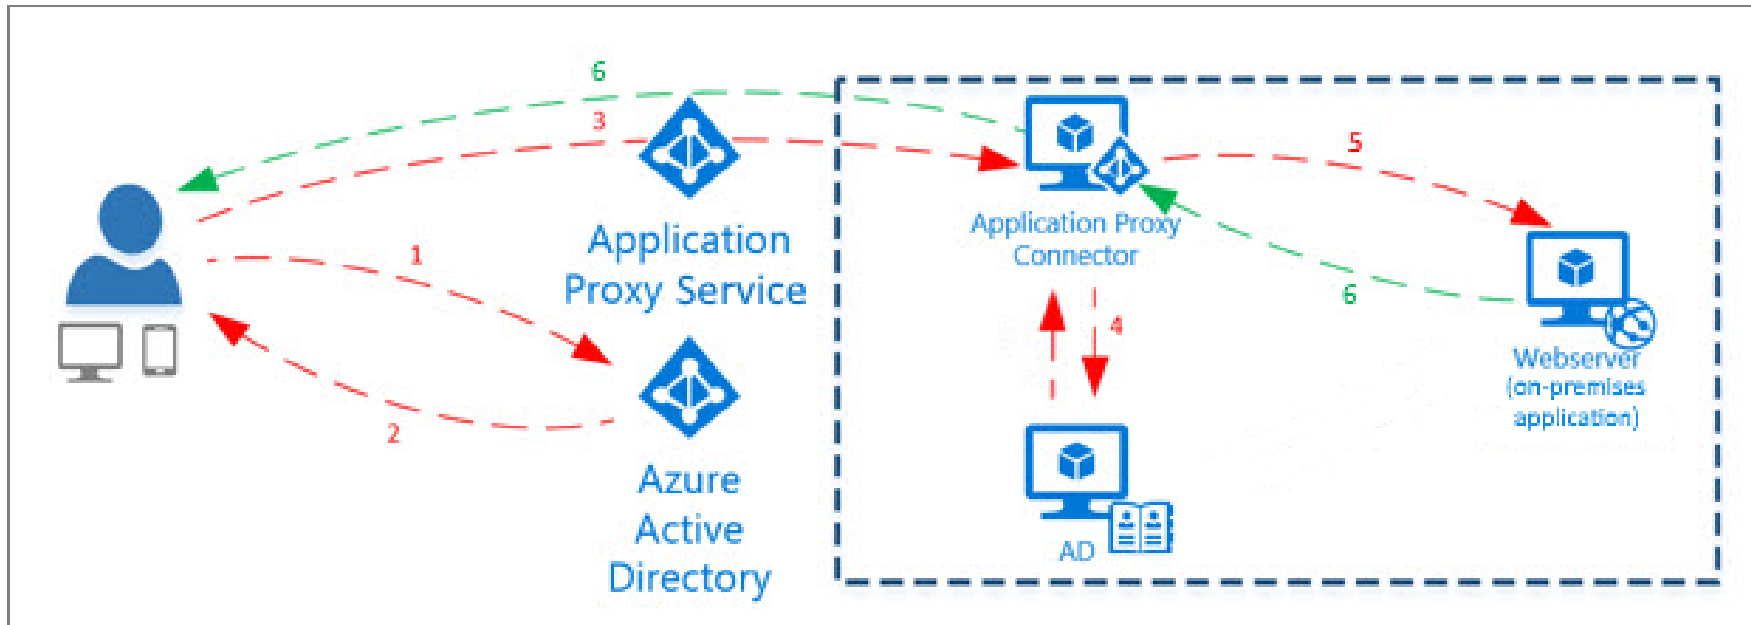

[Microsoft 365 Licensing: quali funzionalità sono disponibili e confronto tra i piani - ICT Power](#)

What is Application Proxy?

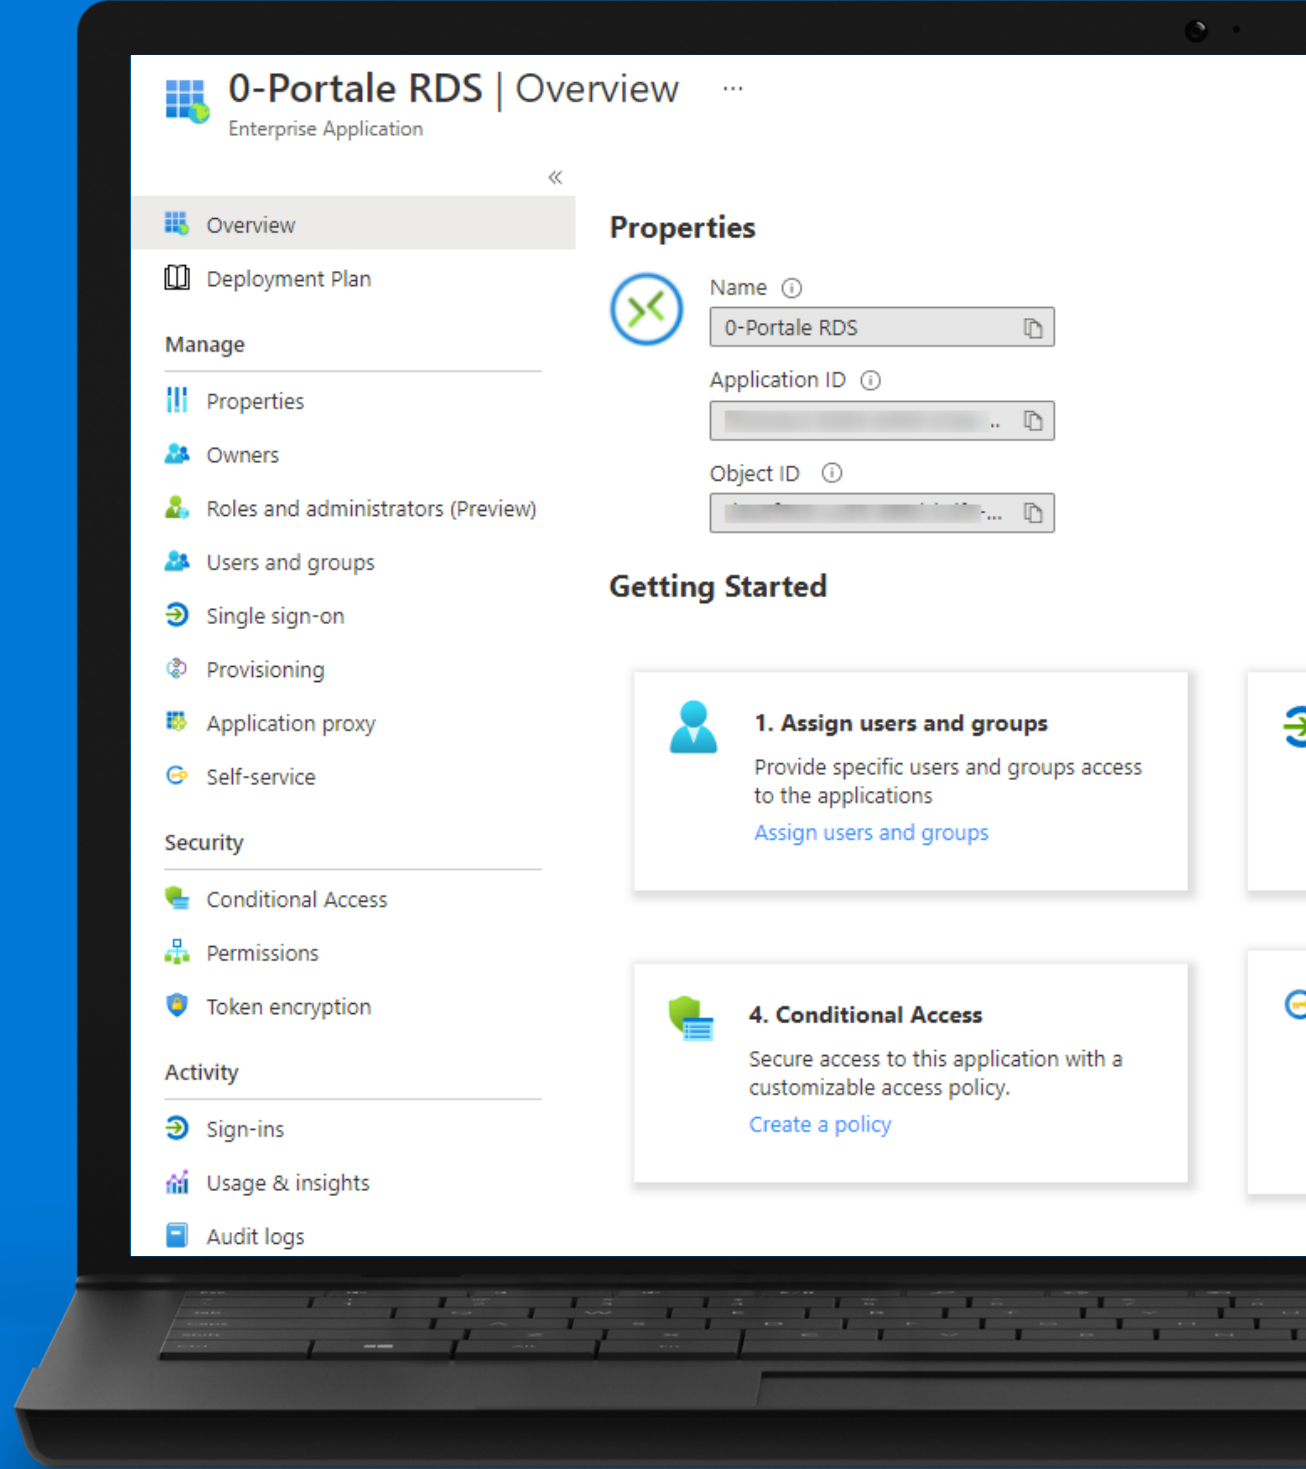

- **Simple to use.** Users can access your on-premises applications the same way they access Microsoft 365 and other SaaS apps integrated with Azure AD. You don't need to change or update your applications to work with Application Proxy.
- **Secure.** Application Proxy doesn't require you to open inbound connections through your firewall.
- **Cost-effective.** On-premises solutions typically require you to set up and maintain demilitarized zones (DMZs), edge servers, or other complex infrastructures. To use Application Proxy, you don't need to change the network infrastructure

How Application Proxy works

DEMO

Using Azure AD Application Proxy to publish on-premises apps for remote users

How to test
